ABOUT

CSE undergraduate at IIIT Vadodara with a strong interest in AI/ML and software development. I enjoy building intelligent systems — from machine learning pipelines and deep learning models to full-stack web applications and clean REST APIs. I've worked on projects across AI/ML and web development, including a short research stint under a professor at my institute. I'm especially interested in understanding how models work under the hood and writing code that's not just functional, but clean, efficient, and readable.

EDUCATION

B.Tech — Computer Science & Engineering
IIIT Vadodara 2023 – 2027

ACHIEVEMENTS

- Contributed to a **live AI/ML research project** on tumor survival prediction under faculty at IIIT Vadodara.
- Built **4+ end-to-end projects** spanning ML pipelines, full-stack web apps, and REST APIs.
- Applied **survival analysis models** (Cox PH, RSF) and evaluated with C-index and Brier score.

TECHNICAL SKILLS

Programming Languages

- C, Python, JavaScript
- HTML, CSS

AI / ML

- Logistic Regression, Random Survival Forest
- Cox Proportional Hazards (Cox PH)
- NLP, Model Training, Data Preprocessing
- scikit-learn, scikit-survival
- NumPy, Pandas

Web Frameworks

- React.js, Next.js, Streamlit
- Node.js, Express.js, Django

Databases

- SQLite, MongoDB

Tools

- Git, GitHub, REST APIs

EXPERIENCE

AI/ML Research Project Assistant

IIIT Vadodara — under Prof. Dr. Sanjay Saxena Jan 2025 – Feb 2025
📍 Gandhinagar, Gujarat

- Worked on **Tumor Survival Prediction (Glioblastoma)** — an ML research project under faculty supervision.
- Built a full ML pipeline using clinical records and MRI-derived features to predict patient survival.
- Performed feature engineering on tumor volume and TBI metrics; handled all preprocessing steps.
- Implemented **Cox Proportional Hazards** and **Random Survival Forest** models.
- Evaluated model performance using **C-index** and **Brier score** metrics.

PROJECTS

Mini Health Risk Predictor

Python — scikit-learn — Streamlit — Pandas — NumPy [Github](#)

- Built a **diabetes risk prediction** system using Logistic Regression trained on a Kaggle dataset.
- Designed a Streamlit UI for real-time input and instant risk prediction output.

Tumor Survival Prediction (Glioblastoma)

Python — scikit-survival — scikit-learn — Pandas — NumPy

- Developed an **ML pipeline for survival analysis** using clinical and MRI data.
- Applied Cox PH and Random Survival Forest; evaluated using C-index and Brier score.

Full-Stack Plant Shopping Website

React — Next.js — Node.js — Express.js [Github](#)

- Built an e-commerce app with product listings, cart functionality, and a responsive UI.
- Developed REST APIs connecting a Next.js frontend to an Express.js backend.

Blog Application (Django CRUD)

Python — Django — SQLite — HTML/CSS [Github](#)

- Built a fully functional blog platform with post creation, editing, and deletion.
- Managed data persistence using SQLite and Django's ORM throughout.

Django Articles Platform

Python — Django — SQLite — HTML/CSS [Github](#) — [Live](#)

- Built a full-featured article publishing platform with user **authentication** (login, signup, logout).
- Implemented complete **CRUD** — users can create, edit, and delete their own articles.
- Restricted edit and delete actions to article owners; unauthorized access is blocked.
- Deployed live on Render with a persistent SQLite backend.
